MacArthur Green is helping to combat the climate crisis through working within a carbon negative business model. Read more at www.macarthurgreen.com.

1 INTRODUCTION

This annex provides tables of seabird abundance in each survey for each species recorded during baseline surveys for the Five Estuaries Offshore Windfarm (VE) (March 2019 – February 2021).

Abundances were estimated using design-based methods and are summarised as central estimate (i.e. extrapolated from the number seen in the surveyed area to the whole area) and 95% confidence range, derived from 1,000 nonparametric bootstrap samples.

Table 1. VE North. Abundance of Black-headed gull recorded on each survey in flight and on the sea, S.D. and 95% confidence intervals, in the Array Area, Array Area and 2km buffer and Array Area and 4km buffer.

Survey	Abundance					
	Array Area		Array Area & 2km buffer		Array Area and 4km buffer
